

## HOW TO DETECT **HEAD LICE?**

1. Wet the hair.
2. Ensure there is adequate lighting.
3. Use a special fine-tooth comb designed for this purpose.
4. Inspect the hair one strand at a time, running the comb along it from scalp to tip.
5. Each time you run the comb through the hair, check it afterward for lice. Use a magnifying glass if necessary.
6. Wipe off the comb and repeat step 5 until you are done.
7. Pay careful attention to the nape and behind the ears.

- An adult louse is the size of a sesame seed.
- A nit is the size of a grain of sand.

▶ If you detect lice, consult your pharmacist, who can prescribe an effective treatment.
